### Webster's 1913 Dictionary

lip'íd

- n. 1. (*Chem., Biochem.*) Any of a variety of oily or greasy organic compounds found as major structural components of living cells; they are insoluble in water but soluble in organic solvents such as alcohol and ether, and include the common fats, cholesterol and other steroids, phospholipids, sphingolipids, waxes, and fatty acids; some of the lipids, together with proteins and carbohydrates, form an essential structural component of living cells, as in the cell walls and membranes. The term **lipid** refers to its solubility in nonpolar solvents, and has no significance with regard to chemical structure.

### WordNet Dictionary

- Noun 1.** **lipid** - an oily organic compound insoluble in water but soluble in organic solvents; essential structural component of living cells (along with proteins and carbohydrates)

**Synonyms:** lipide, lipoid
